Professional Study Tool and Reliable Exam Practice Material

Exam : A2030-280

Title : Assessment: IBM Cloud Computing
Infrastructure Architect V1

Vendors : IBM

Version : DEMO

NO.1 Which IBM product implements metering capabilities?

- A. IBM Tivoli Monitoring
- B. IBM Tivoli Common Reporting
- C. IBM Tivoli System Automation
- D. IBM Tivoli Usage and Accounting Manager

Answer: D

NO.2 What are two considerations before moving data to a public cloud? (Choose two.)

- A. A company must restructure all data to accommodate a public cloud data model.
- B. A company should analyze all legal and regulatory issues that pertain to the data.
- C. A company can safely assume that cloud services will replicate and backup all of their data.
- D. A company should encrypt all data so that they do not have to analyze legal and regulatory issues.
- E. A company should analyze data structure to see if they can take advantage of public cloud data models.

Answer: B,E

NO.3 Which area of the current IT enterprise availability and redundancy components must be addressed in order to move to a cloud operational model?

- A. server capacity to service capacity
- B. workload availability to service availability
- C. application availability to workload availability
- D. server mean time between failures (MTBF) to service MTBF

Answer: C

NO.4 A company hosts office applications on a stand alone server in their data center. A recent spike in demand for one of their applications resulted in the denial of access to some potential users. Which characteristic of the cloud service delivery model would meet the fluctuating demands of the company's users?

- A. service ubiquity
- B. service elasticity
- C. self-service access

D. usage-based billing

Answer: B

NO.5 Which component is necessary to view monitoring reports for IBM Service Delivery Manager?

- A. Tivoli Enterprise Portal
- B. Tivoli Service Request Manager
- C. Tivoli Service Automation Manager
- D. WebSphere Administrative Console

Answer: A

NO.6 Which technology is used in certain IBM WebSphere DataPower appliances to provide identity

verification of public cloud endpoints and to securely transmit encrypted data between enterprise

endpoints and public cloud endpoints in an integrated cloud environment?

- A. IBM Tivoli CloudBurst Appliance
- B. WebSphere CloudBurst Appliance
- C. WebSphere DataPower Secure Communicator
- D. WebSphere DataPower Secure Cloud Connector

Answer: D

NO.7 What is a critical and unique component during the design and planning process for a cloud service?

- A. IT Service availability
- B. Business Service availability
- C. IT Infrastructure/Component availability
- D. IT Service and Infrastructure/Component availability

Answer: B

NO.8 An enterprise wants to take advantage of cloud computing but retain control over the construction and

delivery of all cloud-based services. Which cloud deployment model will meet their needs?

- A. hybrid cloud
- B. private cloud
- C. community cloud
- D. public shared cloud

Answer: B

NO.9 Which storage infrastructure function provides benefit for public cloud computing?

- A. metadata
- B. multipath I/O
- C. clustered trivial database
- D. real time storage management

Answer: C

NO.10 Which term is used to describe a hypervisor running multiple operating systems simultaneously.?

- A. full virtualization
- B. paravirtualization
- C. partial virtualization
- D. nested virtualization

Answer: D

NO.11 A customer wants to implement a private cloud solution and they are anticipating changes in their current virtualization operational model. Which virtualization configuration characteristic is affected by the implementation of cloud infrastructure?

- A. higher latency
- B. lower server utilization
- C. higher demand/transient use
- D. easier dependency/user management

Answer: C

NO.12 What are two methods that address both network infrastructure security and performance for a cloud computing environment? (Choose two.)

- A. encryption (SSL)
- B. limiting network hops
- C. network load balancing
- D. denial of service prevention
- E. intrusion detection and prevention

Answer: B,D

NO.13 What are two key infrastructure components for data migration when planning a move

to cloud?

(Choose two.)

- A. storage
- B. network
- C. monitoring
- D. data mining
- E. high availability

Answer: A,B

NO.14 A company is setting up a cloud environment to host several of their applications.

These applications

vary in importance and the company wants to ensure that the most business critical applications get the

most resource. Which solution will help achieve this goal?

- A. WebSphere eXtreme Scale
- B. WebSphere Business Events
- C. WebSphere Virtual Enterprise
- D. WebSphere Business Monitor

Answer: C

NO.15 Cloud architectures designed for service delivery and availability of services are extremely important.

How is software failure within a cloud infrastructure environment handled? (Choose two.)

- A. replace the failed node
- B. restart the software image
- C. use elastic IP addresses for consistent and re-mappable routes
- D. allow the state of the system to re-sync by reloading messages from queues
- E. design services with proper real time disaster recovery and stateful user context

Answer: D,E

NO.16 What are two optimized workload characteristics supported by the IBM cloud portfolio? (Choose two.)

- A. analytics
- B. tightly-coupled
- C. centralized message bus
- D. high-performance computing
- E. structured related data model

Answer: A,D

NO.17 What is the collection and control point for alerts?

- A. Tivoli Enterprise Console
- B. Tivoli Enterprise Portal Server
- C. Tivoli Enterprise Monitoring Agent
- D. Tivoli Enterprise Monitoring Server

Answer: C

NO.18 A cloud infrastructure should be architected to accommodate which technical risks?

- A. overflowing network buffers resulting in loss of data
- B. termination of service by an internet service provider
- C. fiber cable damage causing a failover to copper channels
- D. unauthorized configuration changes to storage network devices

Answer: D

NO.19 Which characteristic best describe the difference between Service Oriented Architecture (SOA) and cloud computing?

- A. pay per use model
- B. shared computing resources
- C. SOA exists within the firewall
- D. leverage IT resources on demand

Answer: C

NO.20 A cloud service vendor provides business services such as human resources and payroll processing.

They use Web interfaces on a shared infrastructure providing multi-tenant services without the need to

manage or control the underlying resources. What type of cloud service is this company providing?

- A. Platform as a Service
- B. Software as a Service
- C. Infrastructure as a Service
- D. Business Process as a Service

Answer: D
